

# Content Negotiation in Spring

# Spring MVC

# Content Negotiating View Resolver

- Used by Spring MVC to determine view handler to use
- Auto Configured by Spring Boot
- The Content Negotiating View Resolver will determine the view to use to render the data of the model to the client

# Content Type

- View to use is determined by Content Type in HTTP Header
  - application/json, application/xml, text/html
- If view for requested Content Type is not found, HTTP Status 406 Not Acceptable is returned.
